Do you have a Cellular/Radio Communication problem?

We can help you to overcome your problems offering A much cheaper & better communication option:

We in partnership with Halo technology have the answer to your problems!

The functionality of the SMART PTT system is as follows:-

- You no longer require a REPEATER or BACK-BONE SYSTEM for extended coverage,
- You no longer require an ICASA Licence (covered under the GSM Networks Licence),
- The SMART PTT SYSTEM piggy-backs off the GSM Network, thus giving you extended coverage,
- You can talk ANY DISTANCE, ANYWHERE (provided cellphone coverage is available in those areas),
- Being server based, and working off a Sim-Card, extended coverage is guaranteed,

- As the Sim-Card is encrypted to the tune of 30,000 different tones, the Sim-Card cannot and will not operate in a normal cellphone (security guaranteed),
- Each PTT (press-to-talk) on a radio, is transmitted via the Internet to a Server, which in turn converts Voice to Data, and sends the message back.
- This happens within milliseconds,
- Due to the fact that the SMART PTT SYSTEM gives you extended coverage, only a hand-held portable is required, although a mobile and base station is also available (as per the attached quotation),
- The SMART PTT SYSTEM allows the following functionality:-
 - # Live GPS Track (including speed, distance and time),
 - # Voice recording of all discussions,
 - # Individual Calling,
 - # Group Calling,
 - # Stun & Revive (should a radio be lost or stolen),
 - # Geo Fencing,
 - # Emergency button, as well as a
 - # Dispatcher which allows you total control of your vehicles and personnel – (A link will be loaded onto your Desktop or Laptop – Training will be given free-of-charge).
